Hope Mumme

GitHub: hmumme

I am a Ph.D. candidate at Emory University specializing in bioinformatics, biomedical informatics, and machine learning. My expertise includes (i) performing omics analysis of pediatric leukemias, and (ii) development of and (iii) application of bioinformatics tools and methods.

EDUCATION

PhD Computer Science and Informatics

May 2025 (Exp.)

Concentration: Biomedical Informatics

Emory University (Atlanta, GA)

GPA: 4.0

MSc Computer Science and Informatics

May 2024

Interim Masters

Emory University (Atlanta, GA)

GPA: 4.0

BSc Biomedical Engineering

Dec 2020

Georgia Institute of Technology (Atlanta, GA)

GPA: 3.28

EXPERIENCE

Graduate Researcher, Bhasin Lab

Aug 2021 - Current

Emory University

Atlanta, GA

- Developing CAR-T target identification platform using single-cell RNA sequencing data from leukemia and vital tissues. Identifying targets or pairs of targets, including for logic-gated CARs.
- Utilized supervised learning methods to predict protein expression from mRNA measurements by training with paired CITE-seq data, addressing poor correlation between ADT and RNA levels to accurately label distinct blast populations in MPAL.
- Performed pediatric Pan-Leukemia transcriptomic analysis to identify 9 genes dysregulated in leukemia and over-expressed at diagnosis in AML, ALL, and MPAL
- Developed [PedSCAtlas](#), interactive tool for analyzing compiled datasets of pediatric single-cell RNA-seq cancer datasets for pediatric cancer subtypes
- Performed single-cell RNA-seq analysis of pediatric mixed phenotype acute leukemia (MPAL), and comparison to other acute leukemia subtypes
- Validated our group's 7-gene signature for identification of AML malignant blast cells using external single-cell and bulk RNA-seq datasets
- Assisted with various bioinformatics projects in the lab, such as the development and maintenance of the web resource [Survival Genie](#), single-cell analysis of T-cell acute lymphoid leukemia immune microenvironment, and the single-cell analysis of diabetic foot ulcer healing

Undergraduate Researcher, Jo Lab

Dec 2019 - Dec 2020

Georgia Institute of Technology

Atlanta, GA

- Performed scRNA-seq, scATAC-seq, and lncRNA analysis to study endothelial cell reprogramming in the carotid artery

Data Analysis Internship

June 2018 - Aug 2018

Open Medicine Institute

Mountain View, CA

- Developed a single-cell RNA sequencing pipeline for their patient data
- Developed and implemented personalized healthcare solutions

SKILLS

Programming	R, Python, Bash, Matlab, Markdown, Java, L ^A T _E X, Git
Omics Analysis	scRNA-seq, scATAC-seq, CITE-seq, bulk RNA-seq, Spatial transcriptomics (Visium)
Communication	Oral and Poster presentations at scientific conferences, presenting findings to clinical collaborators
AI	scikit-learn, tensorflow, pytorch
Web Tool Dev.	R shiny, Python dash, HTML
Other	Github, Microsoft Office

TEACHING AND ACTIVITIES

- Emory CS 170, Graduate TA (Fall 2021)
- Atlanta Workshop on Single-cell Omics, Planning Committee (April 2022)
- Emory CS 170, Graduate TA (Fall 2022)
- Emory CS 470, Graduate TA (Spring 2023)
- Emory QTM 150, Graduate TA (Fall 2024)

WORKSHOPS

- NCI [Human Tumor Atlas Network \(HTAN\) Data Jamboree](#) (Dec 2023)
 - download, process, and map immune infiltration of HTAN spatial transcriptomics (ST) data (using scRNA-seq as reference for immune signatures)
 - gained experience with analyzing 10X Visium data and pancreatic ductal adenocarcinoma (PDAC)
 - HTAN Immune Infiltration [Github](#) with our code and results

AWARDS

- Best Poster, [Atlanta Workshop on Single-cell Omics](#) (April 2023)
